2026

★ Bank Exam 2026 ATA Simulator & Anki Intelligent Toolkit [\[Live Demo ↗\]](#)

1:1 ATA exam simulator replicating official China banking certification tests. Features mobile-first responsive bottom drawer sheets, dual-mode scientific & TVM financial calculators, 710 real/mock questions synced with Anki FSRS spaced-repetition cards, custom paper JSON imports, auto-grading, and anti-scraping watermarks.

★ Featured JavaScript HTML/CSS Anki / FSRS Mobile-Ready Finance Web

Linux Whisper Input

Local voice-to-text dictation daemon. Whisper model and CUDA context permanently reside in GPU VRAM, triggered via global hotkey with ~300ms latency.

Python CTranslate2 Wayland PipeWire Linux

Desktop TimeTracker (timetrack)

Automatic window activity and time tracker for KDE Plasma 6 on Wayland. Hooks into KWin scripts and D-Bus with ~13MB RAM footprint; auto-generates daily Markdown reports.

Python KWin D-Bus SQLite Linux

★ Personal LifeOS (Project PAI)

Personal goal, journal, and reflection operating system. Runs across local Arch and remote VPS, running automated periodic review pipelines with LLMs.

★ Featured Python FastAPI SQLite Agent MCP

★ Personal Opportunity Intelligence (POI)

Feed intelligence and opportunity filter. Parses RSS feeds, scores items using a weighted formula, and pushes high-scoring opportunities to Telegram and Notion.

★ Featured Python RSS Telegram Agent

★ Hermes Multi-Agent Network & Vless Node

Automated VPS agent environment with Vless proxy protocol, hosting 18 scheduled cron pipelines (morning briefs, portfolio tracking, server health).

★ Featured VPS Vless Debian Cron 网络

A-Share ETF Auto-Trading System

Automated ETF trading engine for a simulation tournament. Pulls data via akshare, implements box/breakout signals, half-Kelly position sizing, and hard stop-loss.

Python akshare pandas 量化

Finance-Intel Market Intelligence Pipeline

Multi-source financial market monitoring pipeline. Automatically aggregates data into morning summaries and pushes volatility anomaly alerts via webhooks.

Python TradingView 金融

Obsidian-NotebookLM Bridge

Synchronization bridge between local Obsidian notes and NotebookLM. Writes via local REST API when Obsidian is open; falls back to direct filesystem append when closed.

Python Obsidian REST API

OBS Studio Stream & V4L2 Driver Hardening

Linux streaming setup. Locks uncompressed YUYV 4:2:2 to prevent decoder crash loops, hardens udev against sleep, and drives dynamic text overlays via Lua scripts.

V4L2 Lua OBS Linux

WTF Terminal Cockpit Widgets (Fork) (Fork Custom)

Custom Go TUI modules for wtfutil to display personal PAI sprint goal progress and POI curated opportunities inside the terminal.

Go TUI Linux

WriteMap (Visual Writing Coach)

Full-stack English essay writing web app. Features rich text editing, structural tree breakdown, and multidimensional radar chart evaluation using Next.js & Prisma.

Next.js React TypeScript Prisma Web

Passive AI Note-Taking System

Telegram bot for zero-friction note ingestion. Accepts text/voice messages, classifies them using Gemini, and dispatches them to Notion and Obsidian.

Python Docker Telegram Gemini Agent

Vitals-Skill Family Health Data Tracker

Python automation workflow that structures physical exam reports and medication records into clean Markdown tables for longitudinal health tracking.

Python Obsidian OCR

mc118-cloud-suite Low-Bandwidth Cloud Deployment

Hardened Minecraft Paper 1.18.1 cloud deployment. Protocol-level tracking tuning cuts outbound traffic by >75%; includes zero-trust reverse-pull SSH backups.

Docker Debian Bash Linux

Lecture Audio Batch Chunking & Whisper Transcription

Batch audio transcription pipeline using faster-whisper and FFmpeg, routing hours of lecture recordings into organized transcripts by course name.

Python Whisper FFmpeg

Linux Workstation & VPS Network Infrastructure

Tuned Arch Linux workstation and Debian cloud VPS; engineered Trojan network proxies, Cloudflare CDN/DNS edge routing, and automated Let's Encrypt TLS certs.

Arch Linux Debian Cloudflare SSL/TLS 网络

Gaokao College Admission Data Scraper

Scrapes and normalizes historical university admission cutoffs, rankings, and quotas from gaokao.cn into clean CSVs for data-driven college application decisions.

Python Requests Pandas 数据

Unipus Helper Userscript

Tampermonkey userscript for courseware platform. Automates heartbeat pings to dismiss timeouts, extracts DOM questions, and autofills model responses.

JavaScript Tampermonkey Web

Timezone Spoofer Browser Extension

WebExtension that overrides Date and Intl prototype methods at document_start to spoof browser timezone based on proxy exit nodes, preventing fingerprinting.

JavaScript WebExtension 安全

Freelance Information Design & Dispatching Tokenomics

Freelance slide deck information layout design, paired with physical errand courier dispatching experience that inspired a tokenomics-driven campus knowledge network draft.

设计 信息排版 模型设计

100-Player Minecraft Server Community

At age 10, self-taught PPPoE dynamic IP routing and router port forwarding to host a Spigot server; grew a forum-based community to 100+ players with holiday events.

PPPoE 端口映射 Java 网络启蒙
